

REPRINT

Letter to Mr. Paul Kellert

Page Two (2)

7. Almost no spider webbing was evident on the finish surface.
8. Kel-Crete was also added to pumping gun mixture on exterior and interior walls at the new Granite prison. Not one cold joint or layer disbonding occurred on the entire job.
9. Even after extensive use, no harmful effects have been noted from the standpoint of human health.

Summarily, the most significant assets evident when adding Kel-Crete to the mix was the ease of finishing, the added strength achieved and the very evident lack of leaching of the finished product.

I have had many products submitted for evaluation, but this is the only product that has lived up to each and every claim.

Sincerely,

Thomas J. Wright
Construction Superintendent
