

Suggested Mix Design Specifications For Pre-Blended Kel-Crete Premium Super Dry Admixture

Note: Kel-Crete Premium Super Dry is a **water reducer, plasticizer, air entraining and gelling** admixture that is also **non-toxic**.

Suggested dosages are based upon use with 100 pounds of Portland cement.

- A. For plaster, stucco, shotcrete, concrete, pre-blended products use $\frac{1}{2}$ to $1 \frac{1}{2}$ ounces by weight per 100 pounds of cement.

Note: The average dosage is **one ounce per 100 pounds of cement** in most market areas. Adjustments may vary based upon the quality and sharpness or roundness of the aggregates.

- B. For pre-blended masonry products the average dosage is one ounce by weight per 100 pounds of Portland cement, and 2% by volume of hydrated lime. Hydrated lime is required to meet the Uniform Building Code's compliance in most areas.

Note: Suggested pre-blended dosages are for hand applied, or pumping applications.

Note: Should you be pre-blending sand/aggregates into the mix design product you may use 3, 4, and 5 parts total sand/aggregates to 100 pounds of Portland cement.
